### Colour is for everyone

Always at the forefront of colour and innovation, CIN has adopted the universal colour code for the colour blind, Color ADD®. This is a monochrome graphic code that enables the colour blind to identify colours

in a quick and simple way through a process of logical association that is easy to memorise. The code starts using primary colours (blue, red and yellow), represented by symbols, which are then composed into secondary colours.

Two more shapes are added to the primary colour symbols to represent white and black. When combined with other colours, these will turn them either lighter or darker.
