Colour is for everyone

Always at the forefront of colour and innovation, CIN has adopted the universal colour code for the colour blind, Color ADD®. This is a monochrome graphic code that enables the colour blind to identify colours

in a quick and simple way through a process of logical association that is easy to memorise. The code starts using primary colours (blue, red and yellow), represented by symbols, which are then composed into secondary colours.

Two more shapes are added to the primary colour symbols to represent white and black. When combined with other colours, these will turn them either lighter or darker.

Our Brand

Genuine Portuguese company since 1917, CIN is a reference in the coating market. CIN's innovative colours stem from years of research that have led to products of the highest quality with the best performance and unique solutions for indoors and outdoors.

Selecting the colour is one of the most important moments when decorating a space. CIN is aware of this, and has made every effort to ensure faithful reproduction of the colours in this catalogue. However, due to the limitations of printing techniques, the colours may show differences from the original. We recommend, therefore, making a colour test on the surface to be painted before any final application using TESTiT. The test enable customers to make an informed choice and CIN is not responsible for the consequences of their choice or its application.
